

GENERAL TERMS AND CONDITIONS
(Continued)

4. OPERATING PROCEDURES (Continued)

4.8 Arrangements Prior to Receipt and After Delivery:

It shall be Shipper's obligation to make arrangements with other parties and make payments for delivery of gas into Transporter's system at the Receipt Point(s) and for receipt of gas after transportation to the Delivery Point(s). Shipper shall be obligated in such arrangements to require daily dispatching and operating coordination by such other parties with Transporter and access by Transporter to appropriate charts and records of upstream pipelines. Such arrangements must be satisfactory to Transporter.

4.9 Operating Information, Estimates and Records:

Upon request of Transporter, Shipper shall from time to time submit its best estimates of the daily, monthly and annual quantities of gas to be transported or stored, including peak day requirements, together with such other operating data as Transporter may require in order to plan and schedule its operations. Transporter shall keep accurate records of the quantities of gas nominated and scheduled for transportation and any imbalances and those quantities nominated and tendered for liquefaction and nominated for vaporization, which records shall be made available to Shipper at its request.

4.10 Liability:

This Section 4 shall not exempt Transporter from liability it may otherwise have to Shipper arising from negligence, gross negligence or intentional tort.

4.11 Other Procedures:

Transporter reserves the right to impose temporarily, at any time and in a non-discriminatory manner, reasonable operating conditions upon the transportation or storage of Shipper's gas which Transporter, in its good faith judgment, deems necessary to protect the integrity of its system. At the earliest feasible time, Transporter shall provide notice to its Shippers of the imposition of, and the anticipated duration of, any such operating conditions.
