

GENERAL TERMS AND CONDITIONS
(Continued)

3. QUALITY (Continued)

3.2 Quality of Gas delivered by Transporter at Delivery Point (cont.)

- (c) Liquids: The gas shall be free of water and hydrocarbons in liquid form at the temperatures and pressures at which the gas is delivered.
- (d) Odorization: The gas delivered to each Delivery Point shall be odorized consistent with the parameters set forth in Section 192.625 of Title 49 of the Code of Federal Regulations.

As between Transporter and Shipper, Transporter shall have no obligation whatsoever to provide any warnings concerning the delivered gas, including but not limited to warnings on safe handling and use, appropriate engineering controls, or safe work practices.

In the event Transporter elects to no longer inject odorant as described above, Transporter will issue a written notice to such effect to all Shippers and Receiving Parties at least twelve (12) months in advance of ceasing odorant injection.

- (e) Heating Content: Transporter is to tender delivery to Shipper only natural gas which is commercial in quality containing an average gross total heating value of not less than 975 Btus per cubic foot.

3.3 Determination of Gross Heating Value and Component Analysis.

Transporter shall determine the gross heating value of the gas received at the RNG Receipt Point and its component analysis at reasonable intervals. Such determination, at Transporter's sole discretion, shall be made using an online chromatograph, by chromatograph analysis of a representative sample of gas taken in a continuous sampler, or by an analysis from an independent certified third-party laboratory as provided in Transporter's RNG testing procedures. Transporter, at its sole discretion, may also allow the use of spot samples. If at any time and for any reason either the party tendering the RNG or Transporter should question the results of any spot sampling, a redetermination shall be made and a redetermination procedure mutually acceptable to the parties shall be used; provided, however, if neither party questions such results within a period of sixty (60) calendar days following the determination thereof, then such results shall be deemed conclusive and binding upon the parties. Btu measuring equipment shall be maintained by Transporter at the RNG Receipt Point or other locations where gross heating value of the gas received at the RNG Receipt Point may be reasonably determined.
