

GENERAL TERMS AND CONDITIONS
(Continued)

3. QUALITY (Continued)

3.1(b) Quality of Gas received at RNG Receipt Point by Transporter (cont.)

(4) Transporter prohibits the delivery of RNG to Transporter's Receipt Points from any landfill permitted under the Resource Conservation Recovery Act Subtitle C (42 U.S.C. § 6921 - 6932), as amended, whether by the United States Environmental Protection Agency or by a state under a program authorized by the United

States Environmental Protection Agency ("Hazardous Waste Landfills"). A Hazardous Waste Landfill includes all continuous land and structures, and other appurtenances and improvements, on the land used for the treatment, transfer, storage, resource recovery, disposal or recycling hazardous waste management units, or combinations of these units.

Any party that tenders RNG to Transporter at an RNG Receipt Point shall certify in writing to Transporter that the RNG is not being produced from landfill gas collected from a Hazardous Waste Landfill before the RNG is delivered into Transporter's pipeline system. If the source of the RNG changes after the certification provided above, the party shall provide a new certification to Transporter in accordance with this section. If a party certifies that RNG it tenders to Transporter is not produced from a Hazardous Waste Landfill, and a landfill that is the source of the RNG is subsequently designated as a Hazardous Waste Landfill, the party shall not tender to Transporter any additional RNG from that source after such designation.

(5) Testing Procedures. Testing by Connecting Party and Transporter shall be performed to assess whether the RNG conforms to the gas quality limits specified in Section 3.1(b) using two methods, lab testing or onsite analysis. Lab testing will be utilized during Design Testing and Periodic Testing. Onsite analysis will be utilized during Continuous Monitoring. Both methods may be utilized during Pre-Injection Testing.

Connecting Party and Transporter shall reasonably agree upon an independent certified third-party lab(s) and testing protocols the Connecting Party will employ for sampling and lab testing. The costs associated with Baseline Testing, Pre-Injection Testing, Periodic Testing, and, if applicable, Continuous Monitoring by Connecting Party; and any required retesting or expedited testing are the sole responsibility of Connecting Party.

Transporter shall be notified three (3) business days in advance of the RNG sampling for lab testing and have the option to observe the samples being taken. Test results will be shared with the Transporter within five (5) calendar days of the test results being received by the Connecting Party. RNG shall not enter Transporter's pipeline system until test results have been verified and accepted by Transporter, provided Transporter shall not unreasonably withhold, delay, or condition such verification and acceptance.
